

Creative tip EFAPLAST „Wind chime mobile“

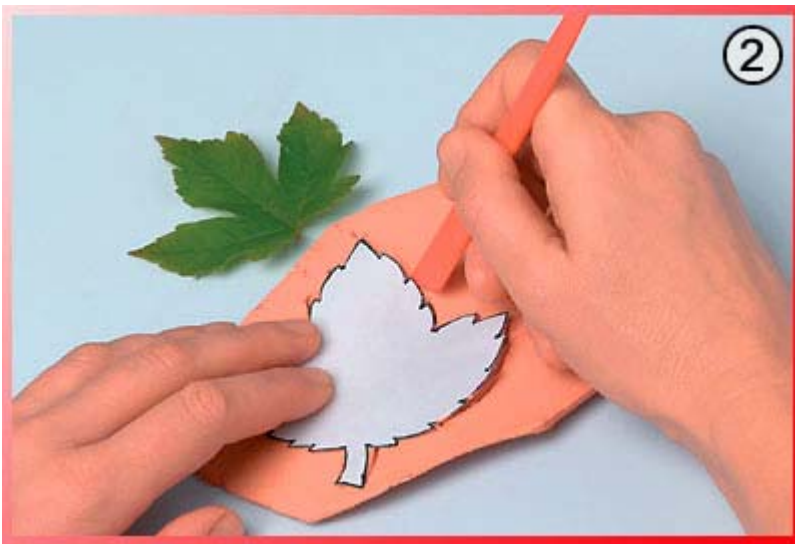

Step 1

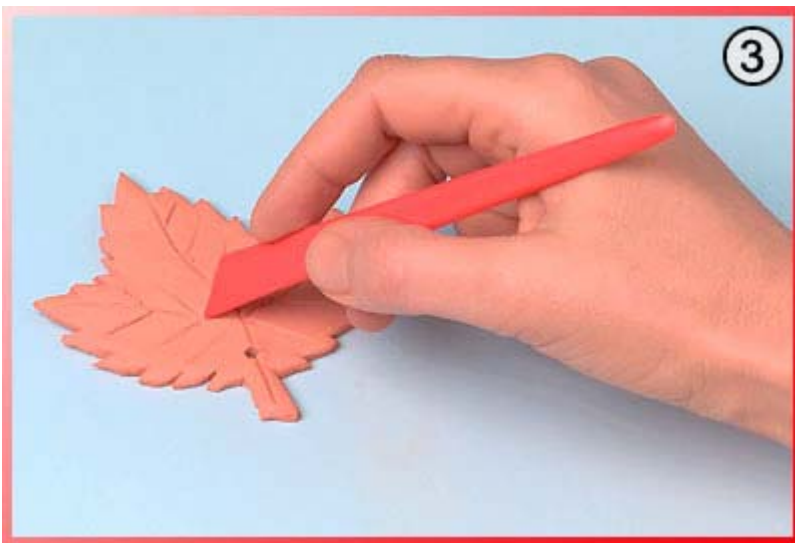

Roll out terracotta-coloured EFAPLAST classic on a work surface.

Step 2

Cut out the leaf templates, place them on the rolled-out modelling material and cut around the edges using a modelling tool.

Step 3

Using the modelling stick, make leaf contours in the surface of the leaves. Pierce a hole in the leaves for the thread so that they can be hung onto the mobile later. Then leave to dry for several hours - the drying time depends on the size and thickness of the leaves. Turn the leaves over every now and again in order to ensure that they dry thoroughly.

Step 4

Retrace the veins of the leaves using a white DECORO lacquer marker.

Hang the leaves on e.g. a branch and that's it - your mobile is finished!
